

pewag practrack

at a glance

pewag
forestry

pewag practrack – the right product for your needs.

- **Lighter** and therefore lower fuel consumption
- **Optimal price-performance** ratio for harvester, forwarder on the non cargo side and skidder
- **Improved self-cleaning** properties compared to bluetrack
- Standard **pewag quality**

pewag prac stub

- Robot-welded
- prac stub – one on each cross member
- Heat-treated

pewag practrack c-link

- High wear resistance
- Case-hardened
- Robot-welded

pewag practrack connecting link

- Forged
- Tire-friendly design
- Case-hardened

pewag practrack line

The **pewag practrack line completes** the track family for an optimal price-performance ratio for harvesters, forwarders on the non cargo side and skidder. practracks are available for both, mono and bogie wheels.

Superb traction and stability – individual cross member profiles improve stability on all subsoils and increase cross-country mobility. The cross members of the flow and flow-perfect have a thickness of 16 mm.

The pewag practrack standard is one weld-on prac stub on each cross member.

High wear resistance – high-quality forged parts such as connecting links, stubs and locks ensure a long lifespan. In addition, c-links and connecting links are specially case-hardened for even better wear resistance. pewag uses high-grade materials that are forged, hardened, welded and pressed into shape based on stringent quality controls.

Highly cost effective – the optimised fit of the tracks ensures perfect traction and prevents the tires from slipping through the track. This reduces fuel and energy consumption and improves machine efficiency.

When choosing the pewag practrack:
