

peTAG solution

peTAG **solution** Keyfacts

Intelligent software

User-specific adaptation of object data, testing processes and steps. Automates the creation, sending and archiving of test reports. Sophisticated authorisation concept.

Save time & money

Efficient documentation of work processes, thus simplified daily workflows. Data exchange without media breaks, fault-free data communication.

Mobile solution

Direct, location-independent data access (e.g. load capacity, safety information, latest test reports etc.) Smart servicing of objects via mobile app. Offline availability.

Linked-up partnerships

Straightforward exchange and efficient interaction between service providers, merchants and customers. Improved service and data quality. Increased satisfaction and loyalty.

Always up to date

Access to the latest product data and information, overview of all test data, documentation of test procedures. Traceability of object history.

peTAG **solution** – The smart solution

peTAG solution means perfect interaction between hardware and software, making it the intelligent solution for unambiguous object identification, data transfer without media breaks, easy servicing of objects, safe document archiving, efficient interaction with partner businesses and much more.

peTAG solution – The intelligent core

The peTAG manager characterises the heart of the whole peTAG solution. PC and mobile devices work hand in hand in order to increase data quality. The inspection steps, which are adaptable to individual requirements, simplify the individualization of the service processes – allowing for it to be used in combination with several products that are subject to regular inspections.

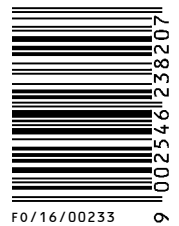

The complete and structured documentation as well as comprehensive analysis ensure data transparency. In addition a sophisticated authorization concept supports networking with various business partners
